### DESCRIPTION OF THE BOOK EVOLUTION

Since Charles Darwin's masterpiece 'The origin of Species by natural selection' was published in 1859, evolution has become an established science that illuminates and informs our understanding of many central biological issues from animal development to animal behaviour. Evolution 2/e stands alone amongst the major textbooks by focusing on key principles to offer a truly accessible, unintimidating treatment of this fascinating subject Part One introduces the basic mechanisms of microevolution: selection, inheritance, and development. Part Two considers how natural selection has designed organisms for reproductive success. Part Three explores macroevolutionary processes such as speciation and extinction and the techniques which are used to study these. Part Four examines key events in evolution throughout the geological record. Finally, Part Five discusses two subjects, coevolution and evolutionary medicine, which integrate and contrast micro- and macroevolution. The book closes with a chapter that recapitulates major issues, discusses unsolved problems, and looks ahead to future developments in this dynamic field. Recent advances in molecular biology and genetics have fuelled a renewed interest in evolutionary biology, and have given us new tools with which to explore the field, revolutionising our understanding of how evolutionary processes impact upon many aspects of biology. A rigorous yet engaging text, Evolution 2/e is perfect for any student wishing to gain a sound understanding of the subject. Online Resource Centre:- Figures available to download, to facilitate lecture preparation, - Self test questions linked to each chapters in the textbook - Key glossary terms in an interactive crossword format

### EVOLUTION - WIKIPEDIA

Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. A Closer Look: Darwin's theory of evolution by natural selection assumed that tiny adaptations occur in organisms constantly over millions of years. Gradually, a new species develops that is distinct from its ancestors. The theory of evolution by natural selection, first formulated in Darwin's book "On the Origin of Species" in 1859, is the process by which organisms change over time as a result of changes in. allowing any visitors who may find the subject objectionable for religious reasons to easily bypass it. Evolution: Evolution, theory in biology postulating that the various types of plants, animals, and other living things on Earth have their origin in other preexisting types and that the distinguishable differences are due to modifications in successive generations. Use joints, bones and muscles to build creatures that are only limited by your imagination. Watch how the combination of a neural network and a genetic algorithm can enable your creatures to "learn" and improve at their given tasks all on their own. Hank gets real with us in a discussion of evolution - it's a thing, not a debate. Gene distribution changes over time, across successive generations, to give... A fire-fighting cadet, two college professors, and a geeky but sexy government scientist work against an alien organism that has been rapidly evolving since its arrival on Earth inside a meteor. Evolution. Evolution is a personal information management application that provides integrated mail, calendaring and address book functionality. Evolution families. An evolution family is a group of Pokémon who will all, if bred with Ditto or a Pokémon in the same Egg Group, make a Pokémon Egg that will hatch into the same Pokémon, excluding baby Pokémon. Evolution. Evolution is among the most substantiated concepts in science and is the unifying theory of biological science. Charles Darwin co-originated, with Alfred Russel Wallace, the theory of. In Evolution, players adapt their species in a dynamic ecosystem where food is scarce and predators lurk. Traits like Hard Shell and Horns will protect your species from Carnivores, while a Long Neck will help them get food that others cannot reach.
