The management of OpenStack Swift is out of the scope of Cloud Foundry in this case, so our service implementation fell into the first category: managing credentials only. Therefore, the service implementation required a running OpenStack instance somewhere in or near the datacenter. I would like to implement a cloud storage service with the same interface of OpenStack Swift or Amazon S3. In other words, my cloud storage service should expose the same API of the above-mentioned services but with a custom implementation.
