DESCRIPTION OF THE BOOK STARMAN

On April 12 1961, Yuri Gagarin became the first human to leave the Earth's atmosphere and venture into space. An icon of the 20th century, he also became a danger to himself and a threat to the Soviet state. At the age of 34, he was killed in a plane crash. Based on KGB files, restricted documents from Russian space authorities, and interviews with his friends and colleagues, this biography of the Russian cosmonaut reveals a man in turmoil: torn apart by powerful political pressures, fighting a losing battle against alcoholism and rebelling against the cruelties of a corrupt totalitarian regime. 2011 marks the fiftieth anniversary of Gagarin's flight. This new edition of *Starman* includes a new afterword that celebrates the importance of that momentous expedition and reflects on Gagarin's legacy.

Bridges and Karen Allen give fantastic performances, and really that is the major draw of this film. A few days ago we witnessed the Falcon Heavy launch a shiny red Tesla Roadster into space. But now SpaceX enthusiasts are wondering if there is any way to track the Tesla (and the Starman dummy. For those concerned about the fate of Elon Musk's Tesla Roadster — and the dummy named "Starman" that SpaceX sent into space on Tuesday — have no fear. "Starman" was a good, quality series. I loved this show back in 1986, and I became so used to the Robert Hays version of Starman that I remember when I looked up the 1984 Jeff Bridges/Karen Allen movie, I had a hard time accepting Bridges as Starman. Starman is a legacy of super-heroes beginning with Ted Knight in the Golden Age. Knight was a scientist in Opal City who developed a Cosmic Rod with control over gravity, allowing him to fly and shoot energy bolts.
