## **DESCRIPTION OF THE BOOK VIEWING THE CONSTELLATIONS WITH BINOCULARS**

Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners, intermediate-level astronomers, and even people who have not yet turned their gaze to the night sky. The required observing equipment to get the full value from this book is no more than a pair of regular 10 x 50 binoculars, but even more can be seen with a small astronomical telescope. This comprehensive introduction to astronomy and practical observing is far more than a guide to what can be seen in the night sky through binoculars. It introduces the reader to some basic (and some not-so-basic) astronomical concepts, and discusses the stars and their evolution, the planets, nebulae, and distant galaxies. There is a guide to selecting and using binoculars for astronomy, as well, as a 'getting ready to observe' section containing invaluable practical hints and tips. The second part of the book is an extraordinarily complete atlas and guide to the night sky down to 30 N (covering all the USA and Europe). It is illustrated with superb and sometimes beautiful amateur astronomical photographs, detailed maps (down to 5th magnitude), descriptions, and data on all astronomical objects of interest.

## **VIEWING THE CONSTELLATIONS WITH BINOCULARS: 250+ WONDERFUL**

Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners, intermediate-level astronomers, and even people who have not yet turned their gaze to the night sky. Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners, intermediate-level astronomers, and even people who have not yet turned their gaze to the night sky. "Viewing the Constellations with Binoculars" comes in at 518 pages, its only poor review of two stars seems to me to be based on the Kindle version of the book and problems with that format. There are only two reviews, not counting mine. The night sky is filled with stellar wonders, sparkling jewels that hide within them fantastic faraway suns. The ancients saw pictures formed by the stars and thus were born the constellations, which Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners, intermediate-level astronomers, and even people who have not yet turned their gaze to the night sky. The required observing equipment to get the full value from this book is no more than a. Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners,

intermediate-level astronomers, and even people who have not yet turned their gaze to the night sky. The first step to choosing the right pair of binoculars is understanding what all of the different specifications mean. The most prominent specification notated on binoculars, and one of the most important, is a figure that looks something like 10x70 or 25x100. Astronomy Binoculars - What You Can Expect to See. In general astronomical binoculars should not really be thought of as a substitute for a telescope, rather you should think of them as something to be used along with your scope, especially when you want to get a wider field of view and see more of the sky at once. Binoculars provide a wider field of view than most telescopes. A wide field of view reduces the problem of finding objects in the binoculars, which can be a real challenge for a beginner using a telescope with its much narrower field of view. 2. Start with a small, easy-to-use size. 3. First, view the moon with binoculars. 4. Move on to viewing planets with binoculars. 5. Use your binoculars to explore inside our Milky Way. Best astronomy binoculars for comparison.. The night sky is a truly wondrous place, regardless of how you view it: binoculars, telescopes or even the unaided eye. All you have to do is hope for. Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners, intermediate-level astronomers, and even people who have not yet turned their gaze to the night sky. When shopping for binoculars, there is a lot to consider: magnification versus mass, field of view, prism type, optical quality ("sharpness"), light transmission, age of the user (to match "exit. Viewing the Constellations with Binoculars: 250+ Wonderful Sky Objects to See.. View through 50mm binoculars. The step-up to 50mm makes many more stars visible. On a clear night, 50 to 70 cluster members is possible, with 30 to 40 being more usual.

## **VIEWING THE CONSTELLATIONS WITH BINOCULARS - 250+ WONDERFUL**

Orion Resolux 10x50 Waterproof Astronomy Binoculars provide spectacular views of the night sky with a pleasing flat field of view. Fully multi-coated with anti-reflection coatings for crisp performance, let 10x50 Resolux binoculars show you the sky. Binoculars bring the stars a bit closer to your eyes, with a larger field of view that makes the heavens a bit easier to understand. And even a good pair of binoculars will generally be cheaper. Viewing the Constellations with Binoculars is a complete guide to practical astronomy, written for beginners, intermediate-level astronomers, and even people who have. Viewing planets with binoculars One of the most tantalizing prospects of amateur astronomy is learning more about the planets. Saturn and Jupiter are the two planets most easily sighted looking through binoculars, and each should be visible under the right conditions with a steady hand. But, if you don't have access to one, you can get a magnified view of the nighttime sky with a pair of binoculars. Tip Use a star chart specific to the current month to help guide and inform your. You'll get a personal tour of hundreds of stars and the major constellations in the northern and near-southern sky, along with an introduction to the brighter galaxies, star clusters, and nebulae visible with the unaided eye or with a simple pair of inexpensive binoculars. We offer binoculars for every viewing interest, including astronomical binoculars, compact binoculars, waterproof binoculars, birding binoculars, and sport and hunting binoculars. Orion's telescope and astrophotography accessories will enhance your telescope enjoyment without breaking the bank. It's best to evaluate your binoculars by viewing the night sky, a

more demanding optical test than daytime viewing. Good binoculars will produce sharp stars across most of the field (the edge of the field is usually blurry). Binoculars are usually labeled with two numbers, such as 7x35 or 10x50. The first number tells you how much your binoculars will magnify things in your field of view. A magnification of 7x to 10x. Find helpful customer reviews and review ratings for Viewing the Constellations with Binoculars at Amazon.com. Read honest and unbiased product reviews from our users. Astronomy Binoculars - Viewing the night sky through a pair of binoculars can be a breathtaking experience. Unlike a telescope, a binocular is much more compact and can be quickly taken outside for instant astronomical viewing. Binoculars are almost universally acknowledged as the finest instrument for viewing naked eye comets. Comets, and their expansive, ephemeral tails, can have an enormous size in the sky. Bright comets often fill even the large field of wide angle binoculars. Part 2 consists of five substantial chapters covering viewing all the constellations (in both hemispheres) with binoculars. The chapters are arranged in alphabetical constellation order. It should be emphasized that the book assumes throughout that you will be using 10 x 50 binoculars with a six degree field. the binoculars collect, and that makes the target brighter. Binoculars with front lenses measuring 50mm collect more than twice as much light as those mea-
